Practical Assignment Report

Student Activities

Do GeeksforGeeks-Style Software System | Develop likely Linux OS | Generate your own Software development

---

Module: ITLSE801- SOFTWARE ENGINEERING

Program: Btech IT

Lecturer: Eng. Ntezirizaza Maurice

1. Introduction

This assignment has three practical tasks that build hands-on skills in software development, operating systems, and professional software development. Students work on their own PC, then on a Linux environment, and finally produce Final Report. Each task needs evidence (screenshots, code, recordings if any and a written report).

2.Reporting Requirements for the Whole Assignment

Each(Students/Group) should submit these sections:

1. **Task 1:** software description, screenshots, test results if any, GitHub link, etc
2. **Task 2:** Linux installation, commands, script, screenshots, etc
3. **Task 3:** software description, features and innovations, etc
4. Final report including (Title page, introduction, Challenges faced and solutions, Review, Conclusion, lessons learned, References and appendices
